

Cal-Notify Initial Product Backlog

Epic: Cal-Notify Client App

User stories in Epic

- As a California Resident, I should be able to establish and manage my profile in Cal-Notify so that I can get emergency and non-emergency alerts
- As a California Resident, I should be able to specify my contact preferences so that I can configure the channels to receive notifications
- As a California Resident, I should be able to receive emergency and non-emergency notifications based on my preferences and the location information I provided so that I can react to accordingly

Epic: Cal-Notify Admin App

User stories in Epic

- As a Cal-Notify Administrator, I should be able to sign into the Cal-Notify Admin panel so that I can send alerts to subscribed users and visualize alerts information
- As a Cal-Notify Administrator, I want to be able to manually create emergency and non-emergency notifications by specifying the location of the event and the affected area so that I can publish those alerts to the subscribed users
- As a Cal-Notify Administrator, I want to be able to publish alerts from the list of events so that those are pushed to the subscribed users
- As a Cal-Notify Administrator, I want to have access to a map view displaying the current alerts in the dashboard so that I can visualize the data with the location context
- As a Cal-Notify Administrator, I want to be able to retrieve alerts information from the defined sources so that I can publish those to the subscribed users
- As a Cal-Notify Administrator I want to see the number our users reached by a published alert so that I can visualize the impact of that specific alert
